TO WHOM IT MAY CONCERN:

I met Malcolm Currie in 2010, in my capacity as Systems Engineering Training Officer at Huntington-Ingalls Shipbuilding—Gulf Coast Operations. In fact, I was on the interview panel that offered him a position in Systems Engineering. I recall being very impressed with the knowledge and skills he could offer the department. Malcolm possesses both strong technical and interpersonal skills. On the technical side, he has over 25 of mechanical and structural design experience, demonstrating exceptional ability to generate 2D and 3D depictions of ship components, equipment and machinery installations and foundations, and composite diagrams of ship structure and systems. He excels at designing models/drawings that correlate accurately to engineering diagrams, and functions with a high level of competence on architectural/drafting assignments, using both free hand and software modalities, such as AutoCAD.

On the interpersonal side, Malcolm is very effective at building and maintaining collaborative relationships, both one-on-one and in teams. He also possesses strong project management attributes, and I believe he would make an exceptional team lead, project manager, or supervisor, allowing him to combine both his technical and people skills to oversee all aspects of a contract from proposal to product delivery. Demonstrating a keen interest in continuous improvement, he attended every training program offered by the department, and was always eager to improve and take on new challenges. I have never heard anyone say a negative word about him as a professional or as a person. Therefore, I am pleased to recommend him without reservation to any organization requiring the background and qualities described above, and are seeking an individual dedicated to doing the best job possible. If you would like more information about Malcolm's qualifications, don't hesitate to contact me.

Sincerely,

Ken Hultman, Ed.D., LCPC
